

Contemplas Video Analysis

The video analysis software "Templo" from Contemplas can record and analyze movements in 2D. You can use up to 8 highspeed cameras (LAN) for analysis of running and sprinting. It is possible to use up to 4 cameras for synchronous recordings. 3D analysis of jumping, cycling, sprinting, walking and even golfing is possible. You can create a setup where you can combine devices such as cameras, forceplates and EMG. Also Markerless Motion Tracking is possible using Contemplas in Combination with "Theia 3D".
