

Myoton Pro

The Myoton Pro is a device for digital palpation. The device is used in a medical, sports and scientific context. It measures the tone/tension state of soft tissue (F - Natural Oscillation Frequency in [Hz]), biomechanical properties (S - Dynamic Stiffness in [N/m], D - Logarithmic Decrement [relative unit] characterizing Elasticity) and viscoelastic properties (R - Mechanical Stress Relaxation Time [ms], C - Ratio of Relaxation and Deformation time [relative unit]).
